

Has Endometriosis Affected Your Life?

Make a Difference.

If you have been surgically diagnosed with endometriosis, 10 minutes and ½ teaspoon of your saliva could help us find a cure!

Participation is as easy as 1, 2, 3!

1. Submit a DNA sample in the form of saliva - no blood draw is required!
2. Complete a questionnaire regarding family and health history
3. Allow us to review your medical records pertaining only to endometriosis

Genetic Endometriosis Research Study

Juneau  Biosciences

*Discovering the future of
women's health care*

Juneau Biosciences, LLC is focused on genetic discoveries that will revolutionize the approach to women's health care. Our research is currently concentrated on developing diagnostic tools and therapies for endometriosis. We are dedicated to improving the lives of millions of women through our genetic research and innovative health care solutions.

Why Study Endometriosis?

- Currently, more than 10 million women in the United States are known to suffer from endometriosis
- Endometriosis can cause pain, abnormal periods, and infertility
- Women have symptoms of endometriosis an average of 9.2 years before being correctly diagnosed
- Presently, there is no easy method to diagnose endometriosis
- A woman with a sister or mother with endometriosis is more than 6 times more likely to develop endometriosis than a woman without this family history
- Endometriosis is the number one cause of infertility in the United States

Juneau Biosciences is currently searching for women with endometriosis to participate in our genetic research study. Our team of scientists hopes to identify the genes responsible for the often debilitating condition, possibly leading to better diagnosis and treatment for women. Women who participate in our research will potentially make a difference in the lives of women affected by endometriosis in the future. With your help, we look forward to revolutionizing the diagnosis and treatment of this common condition!

Discovering the future of women's health care

Now you can be a part of the solution...

Chances are, you or someone you know suffers from endometriosis.

Even if you have been treated for endometriosis and no longer have symptoms, you can help us understand why women develop the condition by participating in our genetic research.
